DENIED – MAJORITY CLASS

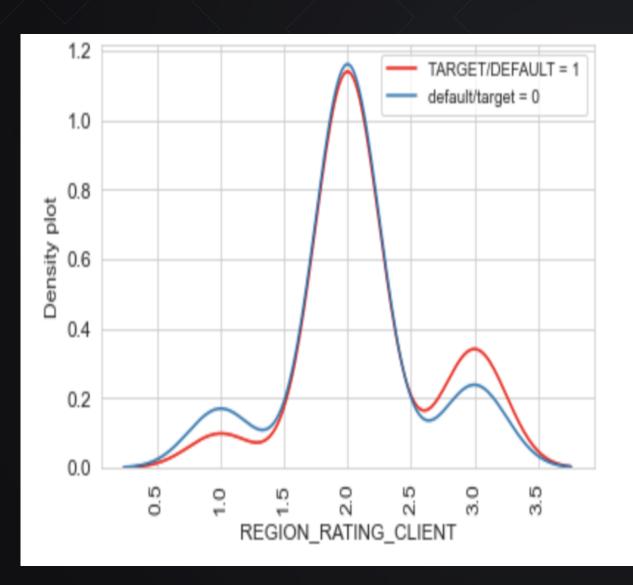

HYPOTHESIS

INCOME

Income doesn't have effect on the default rate.

Boxplot provides that with default as 0 and 1 there is no major difference (except for some outliers).

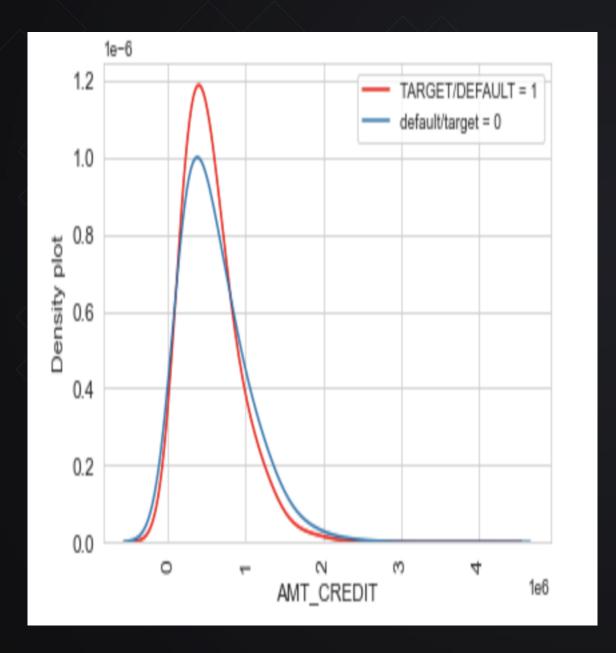

REGION RATING

The region ratings has ratings from 0 to 4 where 4 is low rated area and 0 as high rated.

For right part from 2.5 to 4 of the region rating we can see there is high risk of default whereas for the region rating of 0 to 1.5 on the left side of the plot has less default risk.

Region rating has an effect on the default rate.

AMOUNT CREDIT

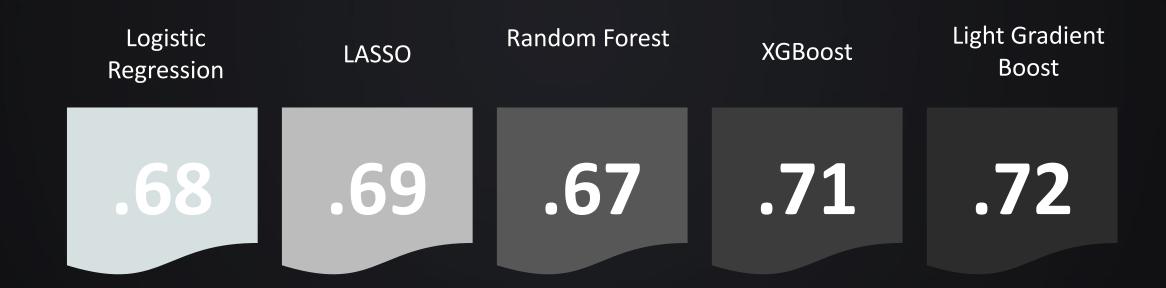

From the density plot the amount credit has no effect on the default rate.

The two plots have the same pattern for the default rate.

Region_Population	-0.037
Region_Rating	0.058

CONCLUSION

The financial Institutions should concentrate on the goods for which the credit has been provided.

The region rating and also region population has an effect on the default rate.

The annual credit amount has an effect on the default rate.

The age of the customer has an effect on the repayment rate as the younger people are more likely to default.
